

2020 Graduate Program

Data Career Pathway

Are you passionate about working with data? Do you have a desire to use data to help develop and improve outcomes for education? If so, then we would love to hear from you. The department is eager to recruit graduates who can use their data skills to help develop policies and deliver programs that contribute to Australia's education today and into the future.

As a graduate you will have the opportunity to utilise and develop your skills through on-the-job experience and a structured training program. The department is focused on attracting graduates from a range of disciplines including economics, commerce, statistics, mathematics, science, and a variety of others that involve working with and analysing data.

The data stream will offer graduates the chance to work in a range of disciplines, including those below. You will be supported with all necessary training, and also provided with access to broader learning opportunities to keep building your general skillset. There are positions available across the department.

Discipline 1: Data Management and Analysis	Discipline 2: Compliance and Assurance	Discipline 3: Economics
Undertaking a range of data activities and improving the way we collect, manage, analyse and release data. There are also opportunities to apply advanced analytical techniques to a range of datasets to gain new insights or evaluate the performance of policies and programs	Monitoring program performance and protecting government outlays by using cutting-edge techniques and visualisations to identify non-compliance and fraud	Developing strategic economic advice and analysis including economic models to support policy development that promote sustainable and achievable outcomes
